On

Check for linked work items

Encourage traceability by checking for linked work items on pull requests.

Required

Block pull requests from being completed unless they have at least one linked work item.

Optional

Warn if there are no linked work items, but allow pull requests to be completed.

On

Check for comment resolution

Check to see that all comments have been resolved on pull requests.

Required

Block pull requests from being completed while any comments are active.

Optional

Warn if any comments are active, but allow pull requests to be completed.

SettingsPoliciesSecurityApprovals and checks

On

Limit merge types

Control branch history by limiting the available types of merge when pull requests are completed.

Allowed merge types:

Basic merge (no fast-forward)

Preserves history exactly as it happened during development

Squash merge

Creates a linear history by condensing the source branch commits into a single new commit on the target branch

Rebase and fast-forward

Creates a linear history by replaying the source branch commits onto the target without a merge commit

Rebase with merge commit

Creates a semi-linear history by replaying the source branch commits onto the target and then creating a merge commit

Settings Policies Security Approvals and checks

Note: If any required policy is enabled, this branch cannot be deleted and changes must be made via pull request.

☐ Off

Require a minimum number of reviewers

Require approval from a specified number of reviewers on pull requests.

☒ On

Encourage traceability by checking for linked work items on pull requests.

Required
Block pull requests from being completed unless they have at least one linked work item.

☐ **Optional**
Warn if there are no linked work items, but allow pull requests to be completed.

☐ Off

Check to see that all comments have been resolved on pull requests.
